

Learn To Grow Orchids

Amateur plant growers all over the world marvel at the ease of growing orchids on windowsills or under artificial lights. They enjoy the beauty and complexity of the flowers, which generally stay in bloom for a long period of time. Grown primarily in bark, moss and other soilless mixes, these plants are surprisingly resilient and make excellent house plants. At the Southern Ontario Orchid Society we welcome, encourage and support the interests of novice growers.

Through our specially designed NEWCOMER seminars we inform and educate on the culture of the more commonly grown orchids. Meetings are held monthly at the Toronto Botanical Gardens. For contact information, meeting dates and times please visit our website.
